

CERTIFIED FISCHER X-RAY CALIBRATION STANDARDS AND ACCESSORIES

DIN ISO/IEC 17025 accredited
Edition February 2022

fischer®

X-RAY Calibration Standards

Quality assurance with energy-dispersive X-ray fluorescence analysis (EDXRF analysis)

Quality assurance and optimum processing procedures play an ever greater role in production. From this stems the necessity to perform reliable measurements, which also comply with the demanding requirements of an ISO certified quality management system.

Energy-dispersive X-ray fluorescence analysis (EDXRF analysis) is a particularly universal, fast and non-destructive measuring method. By using suitable reference materials, it enables coating thicknesses and material composition for a large number of applications to be determined with a high level of precision and in a traceable way. The wide range of industrial applications and the short cycle of product innovation place special challenges on measuring technology and on the availability of calibration standards that are suitable for EDXRF analysis.

The Fischer Calibration Laboratory

Since July 2003 Fischer has been the first institution in Germany to be approved as a DKD/DAkkS calibration laboratory for the "Mass per unit area" measured variable and accredited in accordance with DIN EN ISO/IEC 17025. This accreditation entitles it to issue DAkkS calibration certificates for "Mass per unit area" calibration standards, which are used for calibrating X-ray fluorescence instruments for measuring coating thicknesses. The DAkkS certified calibration standards that are produced by Fischer meet the highest possible quality standard of national metrological institutes such as NIST, BAM etc.

More than 300 Calibration Standards

The standard portfolio comprises more than 300 calibration standards for EDXRF analysis and covers a large number of applications for different industries, such as for example plug contacts, jewelry, PCBs, semi-conductors, RoHS/WEEE and high reliability.

Customer-specific Calibration Standards

Thanks to the technical expertise and many years of experience of the Fischer Calibration Laboratory, we can also offer our customers the unique service of being able to have their own products certified as EDXRF calibration standards in accordance with the DAkkS accredited procedure - an invaluable benefit for you and your customers.

Why DAkkS Accreditation?

The Fischer Calibration Laboratory complies with DIN EN ISO/IEC 17025

Calibration standards from Fischer with DAkkS accreditation give you the following benefits:

- The expertise of the Calibration Laboratory is checked and confirmed at regular intervals by an independent state authority.
- Traceability of the measured results: there is a seamless measuring chain up to internationally recognized base units, e.g. the SI-unit "meter". Only traceability proves, that the printed value is correct with a defined measurement uncertainty. The value is independent of time, person checking, test laboratory and measuring method, and it therefore creates the basis for process and quality control.

With DAkkS certified calibration standards from Fischer, you benefit not only from unique expertise in producing certified reference materials, but you also receive at the same time the warranty for their quality. Thanks to the internationally recognized DAkkS calibration certificate, you also gain security and strengthen customer trust in your products.

Note on Terminology

Calibration standards are also often called reference standards or comparison standards. In the interests of uniform terminology, "calibration standard" is used throughout in this document.

Traceability of Calibration Standards

The traceability of Fischer calibration standards is effected on the basis of the following procedures:

- In accordance with a procedure that is accredited by the German Accreditation Service, Deutscher Akkreditierungsservice (DKD/ DAkkS), see the accreditation certificate at www.helmut-fischer.de/akkreditierung. This procedure can be applied for many pure-element coatings. The Fischer Calibration Laboratory ensures traceability to internationally recognized material measures. You can find the accreditation certificate on the Fischer website:
www.helmut-fischer.com/service/certifications-and-accreditations
- Through comparison measurements with calibration standards, which have either been quantified by the accredited procedure and/or by other procedures. Reference to the calibration standards used and to their nominal values and measurement uncertainty is documented in the traceability reports, see www.helmut-fischer.de/traceability. Specific reference is made to these in the test certificate for the calibration standard. This enables you to track, to which physical material measures your Fischer standards are traceable. You can find the traceability reports on the Fischer website:
www.helmut-fischer.com/service/certified-calibration-standards

The **insignia** designates the DAkkS calibration certificate as an official document. Strict requirements apply to calibration laboratories, and these requirements are regularly checked by the accreditation body of the German Calibration Service, Deutscher Kalibrierdienst (DKD).

The **calibration sign** shows the accreditation number of our laboratory, the number of the calibration certificate and the year and month it was issued. The sign is also on the wallet of your calibration standards.

The **type of calibration object**, here gold coating on nickel base material, in the case of alloys a consecutive sequence of elements, e.g.: NiZn/Fe: Nickel-zinc alloy coating on iron

The unique **identifier** of the calibration object.

The date and signatures confirm the validity of the measured values.

The Back Page of the DAkkS Calibration Certificate

Description of the calibration object

The **traceability** of the calibration standards is effected via a comparison measurement by means of X-ray fluorescence analysis against gravimetrically measured reference standards.

Identification of the calibration standard (as it is also printed on the standard), material and the mass per unit area that is determined. The mass per unit area is the size, which an X-ray fluorescence instrument determines. The coating thickness is derived from the mass per unit area via the material density.

In the case of coatings: **Derived sizes**, such as the thickness in micrometers and micro inches. The nominal value is the nominal value of the calibration object, for example a target coating thickness or catalogue value. This value must not be used for calibration.

Thickness (actual value) and nominal value

The nominal value gives the range, in which the coating thickness or alloy composition should lie. It is also given on the following pages in the catalogue. The exact value (actual value) for the thickness or composition of the material is determined during the qualification of the material. The actual value deviates from the nominal value, because it is not technically possible to produce the exact value, e.g. applying a zinc coating with exactly 37.5 µm. Example:

KAL-N d Zn/Fe 25 µm, solid material standard for single coating, zinc coating on iron base material, nominal value for the zinc coating thickness = 25 µm, but printed on the standard and documented in the certificate is the actual value = 24.8 µm.

Always use the actual value for entering the calibration data in the X-RAY software.

The **measurement uncertainty U** is determined for each calibration standard individually.

Customer-specific Calibration Standards

Fischer offers you the unique service of being able to certify your own product as a calibration standard. In many cases it is even possible to issue an internationally recognized DAkkS calibration certificate. You can show this to your customers and populate it to an existing quality management system in accordance with ISO 9000/1. You also gain security with this in your production process, if a calibration standard corresponds to your products. The production of traceable calibration standards is very time-consuming and also dependent on the quality of the source material. Please therefore observe the following sequence when ordering.

This is how you order a customer-specific calibration standard from Fischer

Notes on the Catalogue

Column DAkkS – Order with Manufacturer's Certificate or DAkkS Calibration Certificate

All calibration standards are supplied with a manufacturer's certificate. If there is a **D** in the *DAkkS* column in the table from page 8, then you can order a DAkkS calibration certificate as an option for this standard. Then add a D to the order number.

Example:

Order with manufacturer's certificate: 603-055

Order with DAkkS calibration certificate: 603-055D.

If there is no **D** in the *DAkkS* column, then the standard is available with manufacturer's certificate only.

Differences between standards with a manufacturer's certificate and DAkkS certified standards

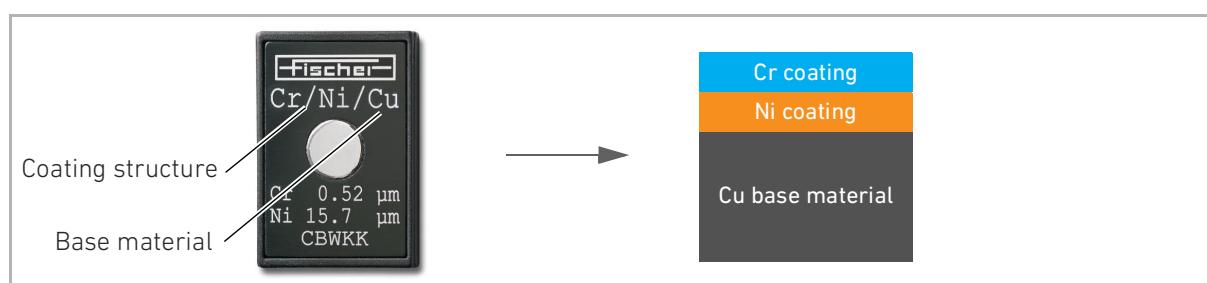

Property	Standard with manufacturer's certificate	DAkkS certified standard
Produced by a DAkkS certified calibration laboratory	✓	✓
Produced in accordance with DAkkS certified procedure	✓	
Proof of traceability to internationally recognized base units	✓	
Internationally recognized calibration certificate	✓	
Worldwide comparability of the measured results	✓	
Acceptance by ISO 9000/9001 certification bodies worldwide	✓	

Nominal value and actual value

In this document the values for coating thickness and alloy composition are always given as nominal values, see page 5.

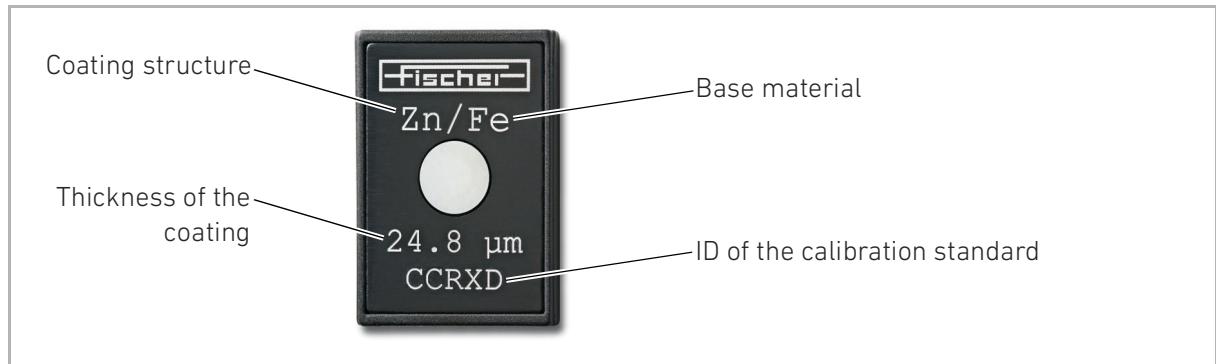

Description of Coating Structure

The standards are identified in such a way, that the outer coating is always on the left and the base material always on the right, see the following figure.

X-RAY Calibration Standards Catalogue

X-RAY Accessories

Products	Description	Ord. no.
	New coating/alloy system New measuring application (product) for: <ul style="list-style-type: none">• New coating system• Solution analysis• Alloy analysis	
	WinFTM extension PDM Extended functions for product administration and result documentation	
	WinFTM extension SUPER Extended functions for experts for the development of new measuring applications	
	Support Product training, staff training, setting up software and measuring applications, performing calibration and programming, connection to data systems, and much more	
	Measuring cell for solution analysis, red Measuring cell with Mo base XAN, XDAL, XDV-SDD: All solutions XUL(M), XDL(M): all except Rh, Ru, Pd	603-215
	Measuring cell for solution analysis, green Measuring cell with Ni base All instruments: specially for Rh, Ru, Pd	603-213

Products	Description	Ord. no.
	Measuring cell for solution analysis, grey Measuring cell with Zr base All instruments: PdNi and highly concentrated Rh, Ru and Pd solutions	603-214
	Solution analysis set Two measuring cells with Mo base, including 1 roll of cover foil 12 µm	603-216
	Solution analysis cover foil 12 µm Replacement cover foil for solution analysis measuring cells, L = 20 m, B = 70 mm	601-564
	Substrate for flexible PCBs Substrate for thin, flexible printed circuit boards, Fe base material, take into account for the measuring application	603-466
	Centering holder Holds the base material and several calibration foils over each other, for Fischer Domino or base material 24 mm x 32 mm	603-439
	Magnet frame Holds Fischer base material and calibration foil over each other, for Fischer Domino or base material 24 mm x 32 mm	850-098

X-RAY Accessories

Products	Description	Ord. no.
	Positioning aid - support tables Combined beam trap and support table with different drill holes, for round parts and as support for flat samples.	602-640
	Cu beam trap As support table for thin and translucent parts (inhibiting the signals from the measuring stage), for RoHS "halogen-free" applications, where applicable, be aware of the Cu signal in the measuring spectrum	604-543
	PVC beam trap As support table for thin and translucent parts, as well as for small parts such as wires or particles on cover foil and filter paper, standard beam trap for all applications apart from "halogen-free"	604-579
	PVC beam trap and wire holder Combined beam trap and support table for positioning wires and cylindrical parts	602-641
	Positioning aid Measuring support table for ABS parts, the raised strip is made of tin	603-020
	Positioning aid tin plasticine mixture For Cr/Ni/Cu/ABS, for Ni and Cu coatings over 30 µm, Sn forms the base material and requires a special measuring application	603-931

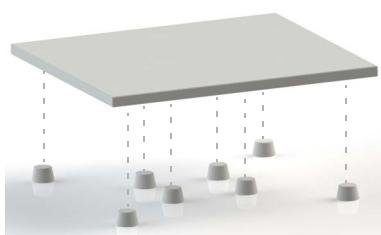

Products	Description	Ord. no.
	Ring holder For the correct measuring of jewelry rings, it is necessary to adapt the software/measuring application, and exchanging the insert at the measuring stage may also be required	605-104
	XUL positioning aid For accurate placing of specimens on the XUL, without opening the lid of the measuring instrument	605-571
	Universal jaw vice For exact placing of specimens with difficult geometry, for example cylindrical specimens with a diameter of approx. 0.5 to 20 mm can be easily placed horizontally or vertically. Dimensions: 95 x 30 x 27.5 mm	604-261
	Material analysis measuring cell set Three 603-261 measuring cells and 1 roll of 601-564 cover foil for analyzing liquid, paste-like or powdery samples	603-260
	Material analysis measuring cell Measuring cells for analyzing liquid, paste-like or powdery samples, please order the 601-564 cover foil separately	603-261
	Pressing tool for chips For preparing samples, e.g. for precious metal chips, where the chips are pressed into a ring and can then be measured	603-978

X-RAY Accessories

Products	Description	Ord. no.
	Pure element plate for instruments with proportional counter tube First element silver, for XUL, XULM, XDL, XDLM	603-001
	Pure element plate for instruments with PIN or SD detector First element sulfur, for XAN, XDAL, XDV-SDD, XDV- μ	602-598
	Pure element plate for instruments with helium purge First element Al, also suitable for XUV 773	604-436
	ABS scattering sample Scattering sample made of ABS plastics, For recording a scattering spectrum for all X-RAY instruments	603-845
	Al scattering sample Scattering sample made of ultra-high purity aluminum, Purity $\geq 999.99 \%$, For recording a scattering spectrum for all X-RAY instruments	603-846
	Adjustment plate XDV-μ To adjust the optical axis of the instruments XDV- μ , XDV- μ WAFER, XDV- μ PCB	605-568

Products	Description	Ord. no.
	Adjustment kit XDV-μ Contains adjustment plate for the adjustment of the optical axis and pure elements plate, for XDV-μ, XDV-μ WAFER, XDV-μ PCB	605-542
	Calibration holder For reel-to-reel strips as base material, holds base material and calibration foil over each other, the holder itself is magnetic, ideal for use with inline measurement systems	850-229
	Drift correction sample for XAN 500 For correction of the spectra library (drift correction) on the mobile X-RAY XAN 500, saves new recording of the spectra library	605-518
	Option solution analysis for XAN 500 For radiation-safe plugging in of measuring cells for solution analysis, contains accessory kit for solution analysis Molybdenum: 2 measuring cells (red) with Molybdenum reference plate, 1 roll of foil	605-391
	Measuring table inserts XAN Replacement measuring table inserts for XAN 120 to XAN 250, 5 pieces per pack, Foil 12 µm	603-301
	Measuring table inserts foil replacement kit XUL/XULM Contains two complete measuring table inserts: one with a large opening and one with a small opening, 1 Roll of foil 25 µm (603-304), 1 knife, 3 replacement fixing rings, manual For all instruments XUL and XULM	600-026

X-RAY Accessories

Products	Description	Ord. no.
	Replacement foil for measuring table inserts foil replacement kit XUL/XULM Foil 25 µm, 150 mm x 10 m, for 600-026	603-304
	Measuring table insert for XAN 250 helium purge 5 pieces, foil 4 µm Use together with helium purge only	605-378
	Measuring table insert for all GOLDSCOPE instruments 5 pieces, foil 75 µm, self-adhesive	524-169
	Stone plate with damper feet XDV-µ For vibration damping, if table is present, consists of stone plate and eight damping feet, for the instruments XDV-µ, XDV-µ LD, XDV-µ WAFER, XDV-µ PCB	1001671
	Vibration damped table XDV-µ For vibration damping, consists of table, stone plate and eight damping feet, for the instruments XDV-µ, XDV-µ LD, XDV-µ WAFER, XDV-µ PCB	604-698

You can find us in:

AFRICA | ASIA | AUSTRALIA | EUROPE | NORTH AMERICA | SOUTH AMERICA

Our measuring instruments, software and accessories are developed, produced and constantly optimized in-house. The goal is to make the world of our customers measurably easier – made in Germany!

Our experienced staff will be happy to advise you locally and in your national language.
